

GPU & CPU Benchmark Report (1080p)

Ryzen 5 5500 vs Core i7-7700 across RTX 30 & 50 Series

This updated document maps the 50-game library into performance tiers while exposing the exact CPU bottlenecks. By comparing the RTX 5060 paired with both the i7-7700 and the Ryzen 5 5500 side-by-side, it becomes explicitly clear which architecture is required to eliminate micro-stutters and maintain a rock-solid 60Hz lock for comfortable, prolonged sessions and frame-perfect routing.

Tier 1: Heavyweight AAA & Path-Traced Titles

These titles feature the most demanding modern engines, including Unreal Engine 5 and heavy ray-tracing implementations, crushing 4-core CPUs entirely.

Tier 2: The Resident Evil Suite

Critical metrics for tight speedrunning routing. The i7-7700 ruins 1% lows even with the ultra-fast RTX 5060, making dodging unpredictable.

Tier 3: Competitive Multiplayer & eSports

These titles crave L3 cache. The i7-7700 wastes the RTX 5060's rendering power by keeping it starved for instructions.
